Let's create a Product Sales Table in Microsoft Excel and apply important functions like SUM, COUNT, COUNTA, MAX, MIN, AVERAGE, etc.

1. Create Product Table

Enter the following data in Excel:

Product ID	Product Name	Category	Price	Quantity	Total
P101	Laptop	Electronics	45000	2	
P102	Mouse	Accessories	500	10	
P103	Keyboard	Accessories	1200	5	
P104	Monitor	Electronics	12000	3	
P105	Printer	Electronics	8500	2	
P106	USB Drive	Accessories	600	8	
P107	Headphones	Accessories	1500	4	
P108	Webcam	Electronics	2500	3	
P109	SSD	Storage	4000	5	
P110	Router	Networking	2200	2	

2. Apply Formulas

Step 1: Calculate Total Price

In cell F2:

=D2*E2

Drag the formula down to F11.

Step 2: Apply Excel Functions

Create a summary section below your table.

Function	Formula	Purpose
Total Sales	=SUM(F2:F11)	Calculate total sales
Total Products	=COUNT(A2:A11)	Count numeric Product IDs
Product Names Count	=COUNTA(B2:B11)	Count product names
Highest Price	=MAX(D2:D11)	Find maximum price
Lowest Price	=MIN(D2:D11)	Find minimum price
Average Price	=AVERAGE(D2:D11)	Calculate average price
Total Quantity	=SUM(E2:E11)	Calculate total quantity
Average Sales	=AVERAGE(F2:F11)	Calculate average sales

Highest Sale	=MAX(F2:F11)	Find highest sale
Lowest Sale	=MIN(F2:F11)	Find lowest sale

Note: Product IDs such as P101 are text, so COUNT will not count them.

3. More Functions for Practice

Try these additional formulas:

Function	**Formula**	**Purpose**
COUNTIF	=COUNTIF(C2:C11,"Electronics")	Count Electronics products
SUMIF	=SUMIF(C2:C11,"Electronics",F2:F11)	Electronics sales
MAX	=MAX(E2:E11)	Highest quantity
MIN	=MIN(E2:E11)	Lowest quantity
LARGE	=LARGE(D2:D11,2)	Second-highest price
SMALL	=SMALL(D2:D11,2)	Second-lowest price
COUNTBLANK	=COUNTBLANK(F2:F11)	Count empty cells

4. Practical Activities for Students

Ask students to complete these tasks independently:

1. Find the total sales amount.
2. Find the most expensive product.
3. Find the cheapest product.
4. Calculate the average product price.
5. Count the total number of products.
6. Find the highest selling quantity.
7. Calculate total sales of Electronics products.
8. Count how many Accessories products are available.
9. Find the second-highest product price.
10. Find the second-lowest product price.

5. Make It a Professional Excel Table

1. Select your product data.
2. Press Ctrl + T.
3. Tick My Table Has Headers.
4. Select a professional table style.

5. Apply currency formatting to Price and Total.
6. Apply borders and alignment.
7. Highlight the highest and lowest prices using Conditional Formatting.

Learning outcome: Students will understand product data management, calculations, statistical functions, conditional functions and professional Excel table formatting.
